

SteelClad Safe Rooms™

Tornado - Hurricane - Intruder - Protection

SteelClad Safe Rooms are safe secure above ground protection from tornadoes, hurricanes and unwelcome intruders. The FEMA approved door design uses a commercial 20 gauge steel door clad with a layer of 14 gauge steel. Heavy duty hinges and deadbolts provide you easy access, security and strength.

SteelClad Safe Rooms are built of incredibly tough 3/16" plate steel with structural channels welded every two feet. Each safe room is anchored solidly to your slab with 3/4" anchors.

FEMA states "Having a safe room built into your house can help you protect yourself and your family from injury or death caused by the dangerous forces of extreme winds. It can relieve some of the anxiety created by the threat of an oncoming tornado or hurricane."

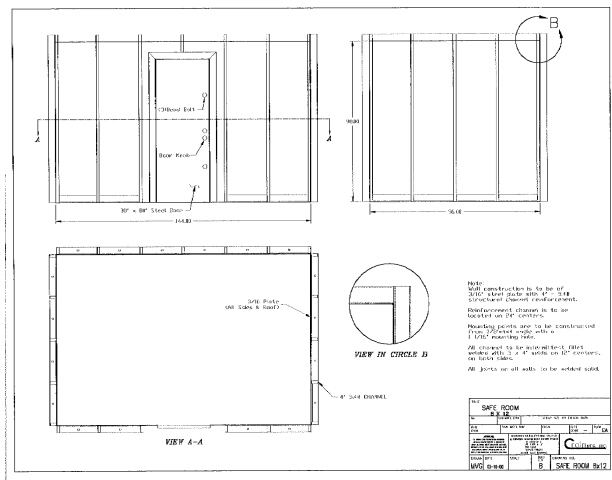

Incorporate a SteelClad Safe Room into your home for safety, comfort and security. Call us today, we're here to help.
